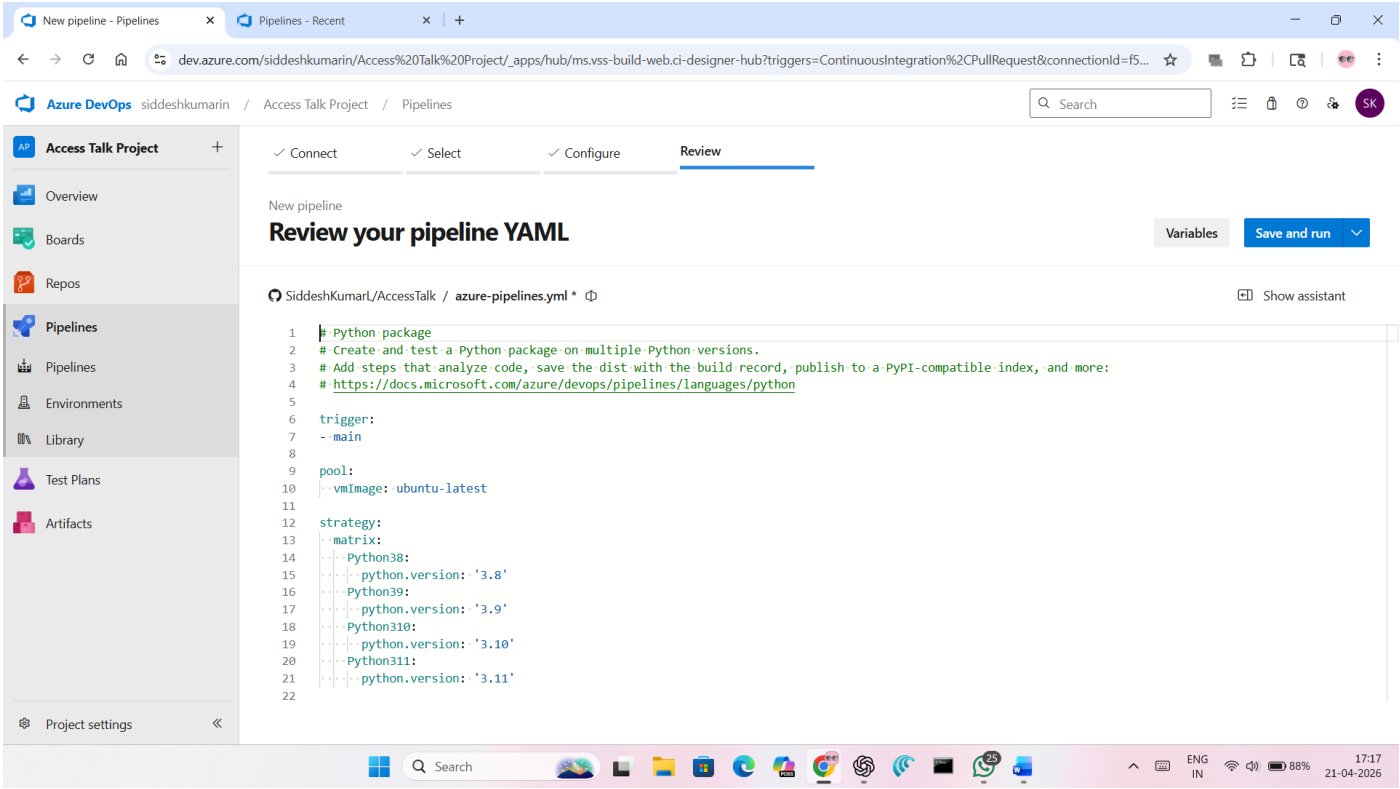
Experiment 10 : Pipeline

Steps to Create Azure Pipeline

1. Open Azure DevOps → Select Project → Go to Pipelines → Click New Pipeline
2. Choose Azure Repos Git → Select Repository (AccessTalk)
3. Select Starter Pipeline (YAML) → Configure azure-pipelines.yml (trigger: main, agent: ubuntu-latest, Python setup)
4. Click Save and Run → Commit YAML file to repository
5. Pipeline triggers automatically → Monitor execution in Pipelines dashboard

Key Configuration

Branch: main | Agent: ubuntu-latest | Language: Python | CI: Enabled



Output :

Pipeline created and executed successfully.
